Now here is a bonus as I write this on July 14th a brand new feature has just released in beta, and its a Code Interpreter! Here is a brief explanation and examples of what it can do. The new feature referred to as "Code Interpreter" in ChatGPT is a powerful tool that allows users to interact with the AI model in a more advanced way. It can interpret and execute code, making it possible to create more complex and interactive applications with the AI model. In the video, the speaker gives several examples of what people have used the Code Interpreter for: 1. A user created a video game where Elon Musk fights Mark Zuckerberg. The game was coded using the Code Interpreter, and it took only 20 minutes to create. 2. Another user demonstrated that ChatGPT with Code Interpreter can detect faces in images. 3. Yet another user uploaded a wide image into ChatGPT with Code Interpreter, and managed to get the AI to pan across the image, creating a cool animation. 4. The Code Interpreter can also analyze data from a CSV file. Let's say you create a CSV file with dates, foods you ate, and how you felt after eating them. Then you can ask the Code Interpreter to analyze the data and find correlations between the types of food you ate and how you felt afterwards. The AI will be able to correctly identify that fried foods are associated with headaches for example. In summary, the Code Interpreter feature in ChatGPT allows users to interact with the AI model in a more advanced way, enabling the creation of more complex applications and the execution of more sophisticated tasks.

Now that we've gone through over 200 ways to use ChatGPT, let's wrap up this book in our Afterword.
